SECTION TWO:
ROAD SURVEY DESIGN
2004-2005 RHODE ISLAND TRAFFIC STOP STATISTICS STUDY

NORTH SMITHFIELD AND SOUTH COUNTY, RHODE ISLAND

In the 2003 Final Report for the Traffic Stop Statistics Act researchers from Northeastern University developed a series of estimated driving population demographics for each community. The racial demographic of traffic stops were then compared to the estimated driving population demographics in each city or town. Following the 2003 release of the Final Report for the Traffic Stop Statistics Act, 2000, some concerns were raised by some members of the law enforcement community about the use of a driving population estimate as a benchmark against which to compare traffic stops. In response to these concerns, researchers at Northeastern University determined it would be helpful to conduct supplemental road surveys in locations where questions about the estimated driving population calculation were raised following the first study.

During the fall of 2004 and spring of 2005 Northeastern University research staff actively sought out agencies that were willing to work together with NU staff to plan and implement road observation surveys during the summer of 2005. Through discussion with the Rhode Island Justice Commission it was determined the most productive of limited resources and time would be to conduct road surveys in locations with road conditions and commuting patterns that differed from the surveys conducted in East Providence and Warwick during the original study. North Smithfield and four communities in South County, including Narragansett, Westerly, South Kingstown and North Kingstown, were selected for road surveys. North Smithfield represents a jurisdiction North of Providence that experiences heavy commuting patterns between Massachusetts and Rhode Island. The agencies in South County represent jurisdictions that experience high volumes of non-resident driving many of whom use local roads to access vacation or tourist destinations.

Road Survey Methodology

For the 2005 road surveys, both stationary and rolling road survey methods were utilized, similar to that employed to validate the driving population estimate in the original 2003 study to measure the demographics of individuals on the roadways in particular locations within a city.¹ Since it is not possible to obtain a full count of drivers in a given area and timeframe, these locations were chosen to represent a cross-section of the driving population in the jurisdictions under study. Working closely with representatives from

¹ In the rolling road survey teams of three to four individuals were assigned to test vehicles. Observers, utilizing a stopwatch, took an observation for a target vehicle approximately every 30 seconds. Observers recorded information on cars as they passed the test vehicle, noting the driver race, gender, number of occupants and license plate information. For the stationary road surveys, observers worked in teams of two taking stationary observations of cars passing through intersections. The observers moved across the corners of the intersection every 15 minutes to capture the demographics of drivers entering and leaving the intersection at various points.

each police department, intersections were chosen with high police activity which would provide a useful snapshot of drivers within their community. If a motorist were to drive through either North Smithfield or one of the communities in South County on any given day, that motorist would almost certainly travel through at least one of the selected survey intersections.

Surveyors received training at Northeastern before conducting the road surveys, and pilot road surveys were carried out in both North Smithfield and South County to test inter-rater reliability – the extent to which two or more observers agree on the race of the driver in each test vehicle. Data from surveyors who collected information within the same location were also compared to test inter-rater reliability. Overall 15,524 observations were taken in North Smithfield, 12,173 observations were taken in Narragansett, 4,952 observations were taken in North Kingstown, 10,406 observations were taken in South Kingstown and 21,826 observations were taken in Westerly between June and October of 2005.

NORTH SMITHFIELD ANALYSIS

In the original Rhode Island Traffic Stop Statistics Report, released in June 2003, 14.7% of all the traffic stops in North Smithfield were of non-white motorists compared to a non-white driving population estimate of 2.9% for the city, yielding a disparity of 11.8%. This meant that the City of North Smithfield fell into a statewide category of high concern. Concerns were raised at the time of the release of the first report that the estimated driving population may not accurately capture the driving demographics in North Smithfield. In order to assess the accuracy of the citywide driving population estimate that was calculated for North Smithfield, we conducted observational road surveys in four locations² throughout the city that corresponded with North Smithfield patrol areas. Teams of trained observers recorded the driving demographics of motorists within each of the locations for different times of the day (morning, afternoon and evening.)³ In total 15,524 observations were recorded in North Smithfield across multiple survey days between June and October 2005.

Table 1 Observed Driving Population Demographics

Location	
146A & Park Ave.	45.5%
146A & N. Main St.	32.7%
146 (Twin River Road Exit) to 146A & Park Ave.	10.9%
146/MA border to 146/146A split	10.9%
Race	
White	90.4%
Black	3.6%
Hispanic	4.0%
Asian	1.9%
Other	0.1%
Gender	
Male	61.6%
Female	38.4%
State	
Rhode Island	75.5%
Massachusetts	21.1%
Other	3.4%

² In North Smithfield we used a combination of stationary and rolling road surveys to capture various types of traffic activity in the survey locations. Specific survey locations were selected against which each of the Patrol Areas was compared. In order to capture the driving demographics of Patrol Areas 1 and 4, observers conducted surveys at the intersection of Eddie Dowling Hwy. and Park Ave. and by driving North and South along Eddie Dowling Hwy. from the Eddie Dowling Hwy./ Park Ave. intersection to the Twin River Road Exit. Road surveys were also conducted at the intersection of North Main St. and Victory Hwy. to capture the driving demographics of Patrol Area 3 and along RI-146 North and South from the 146/146a split to the Massachusetts-Rhode Island border in order to capture the driving demographics of Patrol Area 5.

³ Each location was divided into three 4-hour time blocks: 8am-12pm, 12pm-4pm, and 4pm-8pm. Road surveys were not conducted after 8pm due to the difficulty in accurately observing drivers after this time.

Across all four survey locations white motorists made up 90.4% of the observed drivers, black drivers 3.6%, Hispanic drivers 4.0%, Asian drivers 1.9% and drivers from other racial groups less than 1% (Table 1). The majority of drivers across all four locations were from Rhode Island (75.5%). Of the observed drivers, 61.1% were male and 38.4% were female.

Table 2 Observed Driving Population Demographics by Location

	146A & Park Ave.	146A & N. Main St.	146 (Twin River Rd) to Park Ave. & 146A	146/MA border to 146/146A split
Race				
White	86.5%	97.3%	85.0%	91.5%
Black	5.6%	0.6%	4.9%	2.6%
Hispanic	5.2%	1.4%	7.3%	3.5%
Asian	2.7%	0.6%	2.8%	2.2%
Other	0.1%	0%	0.1%	0.1%
Gender				
Male	58.2%	62.5%	64%	70.5%
Female	41.8%	37.5%	36%	29.5%
State				
Rhode Island	89.2%	70.0%	66.0%	36.8%
Massachusetts	9.0%	27.4%	28.7%	54.5%
Other	1.8%	2.6%	5.3%	8.7%

The demographics of drivers in North Smithfield differed in each of our observation locations (Table 2). At the intersection of 146A and Park Drive 13.5% of the observed drivers were non-white, while at the intersection of 146A and N. Main Street only 2.7% of the observed drivers were non-white.

Now that we understand the differences that exist between observations in each location it is important to compare the demographics of traffic stop data with the demographics of observation data within each patrol area. To most appropriately make comparisons between the stops recorded by the police in their designated patrol areas and the observations of drivers taken by surveyors we re-defined the survey locations to match the North Smithfield patrol areas.⁴ Table 3 illustrates the proportion of stops in each patrol area that were white or non-white and the total observations in that same patrol area that were white and non-white. The final column in Table 3 provides the differences between stop populations and observed populations for each patrol area.

⁴ Following discussions with NSPD staff we determined that road surveys would not be conducted in Patrol Area 2 due to the low numbers of stops in this location and logistical difficulties surveying a section of the town with limited controlled intersections or four lane roadways.

Table 3 Non-White Stops vs. Non-White Observations by Patrol Area

Patrol Area 1	Total Stops=549	Total Observations=6983	Differences between stop data and observation data
White (427)	77.8%	86.5%	-8.7%
Non-White (122)	22.2%	13.6%	8.6%
Patrol Area 3	Total Stops=341	Total Observations=5031	Differences between stop data and observation data
White (316)	92.7%	97.3%	-4.6%
Non-White (25)	7.3%	2.7%	4.6%
Patrol Area 4	Total Stops=1126	Total Observations=8672	Differences between stop data and observation data
White (761)	67.6%	86.2%	-18.6%
Non-White (365)	32.4%	13.9%	18.5%
Patrol Area 5	Total Stops=483	Total Observations=1679	Differences between stop data and observation data
White (368)	76.2%	91.5%	-15.3%
Non-White (115)	23.8%	8.4%	15.4%

It is important to emphasize that the larger the difference in percentage in this final column, the greater the racial disparity. The findings show that some racial disparities are evident in all of the locations in which observations were conducted; however, disparities are greatest in Patrol Area 4.

To understand why racial disparities are greatest in Patrol Area 4 we break down the stops and observations for each racial group in this location. Table 4 illustrates that Hispanics, and to a lesser degree Black motorists, are disproportionately stopped in Patrol Area 4.

Table 4 Difference between Stops and Observations by Race in Patrol Area 4

Race	% of Total Stops	% of Total Observations	Difference between % of Stops and % of Observations
White	67.6%	86.2%	-18.6%
Black	13.0%	5.5%	7.5%
Hispanic	15.5%	5.6%	9.9%
Asian	3.6%	2.7%	0.9%
Other	0.4%	0.1%	0.3%

So now that we know Hispanic and Black motorists are stopped disproportionate to their observed driving populations in Patrol Area 4, we want to know why. Are motorists from different racial groups more likely to be stopped for specific violations which might help us understand how disparities could arise?

An analysis of the stop data reveals that the majority of stops for Hispanic and Black motorists in Patrol Area 4 result from equipment violations. In Table 5, we compare the proportion of stops for equipment violations to the observed driving population for each race to determine if disparities exist. Table 5 also breaks down the percentage of equipment stops and the percentage of observed drivers by morning, afternoon and evening hours to determine if disparities are greater during a specific time period. When the proportion of stops is compared to the proportion of observed drivers for each time period, we find that Black and Hispanic motorists experience the greatest disparities during the evening hours for equipment stop violations.

Table 5 Difference between % of Stops for Equipment Violations and % of Observed Driving Population for each Race in Patrol Area 4

	% Stops for Equipment Violations	% Observed Driving Population	Difference in % of Stops and Observations
Morning			
White	60.4%	89.7%	-29.3%
Black	11.3%	4.6%	6.7%
Hispanic	18.9%	3.7%	15.2%
Asian	7.5%	1.9%	5.6%
Other	1.9%	.2%	1.7%
Afternoon			
White	72.0%	84.4%	-12.4%
Black	5.3%	6.4%	-1.1%
Hispanic	18.7%	5.6%	13.1%
Asian	4.0%	3.6%	0.4%
Other	0%	0%	0%
Evening			
White	56.1%	84.4%	-28.3%
Black	17.5%	5.5%	12.0%
Hispanic	22.8%	7.5%	15.3%
Asian	2.6%	2.6%	0%
Other	0.9%	0%	0.9%

SOUTH COUNTY ANALYSIS

Four communities in South County, Rhode Island (Narragansett, North Kingstown, South Kingstown and Westerly) participated in the observational road surveys in order to test the reliability of the driving population estimate that was calculated for jurisdictions in South County. South County's location along the coast coupled with its proximity to Connecticut, Newport and Providence, Rhode Island make it a popular destination for vacationers and tourists during the summer months, many of whom are driving into South County from other jurisdictions.

Because of the high volume of non-resident driving anticipated during the summer months, surveys were conducted across multiple days during the months of July, August and September 2005 in order to capture an observed driving population that would most accurately reflect the demographics of motorists subject to traffic stops during the summer. Trained surveyors recorded the demographics of drivers in locations⁵ that corresponded to patrol areas in each jurisdiction, and observations were conducted for different times of the day (morning, afternoon and evening).⁶

In Table 1 we compare the percentage of the estimated non-white driving population for each community that was included in the 2003 report with the percentage of the non-white driving population for each community observed during the months of July, August and September 2005.

Table 1 % Non-White Estimated Driving Population & % Non-White Observed Driving Population

	% Non-White Estimated Driving Population	% Non-White Observed Driving Population
Narragansett	4.3%	5.8%
North Kingstown	7.7%	6.5%
South Kingstown	8.7%	6.4%
Westerly	5.5%	5.9%

⁵ Specific survey locations were selected against which each of the Patrol Areas was compared. In order to capture the driving demographics of Patrol Areas in North Kingstown, observers conducted a stationary road survey at the intersection of Tower Hill Road and Shermantown Road and a rolling road survey that was comprised of Rt. 1 North and South, 138 East and West, and Rt. 4 North and South. A stationary road survey was conducted at the intersection of Rt. 108 and Tower Hill Road to capture the driving demographics for Patrol Areas in South Kingstown. In Westerly, stationary road surveys were conducted at the intersections of Broad and Main Streets, the intersection of Railroad Ave. and Rt. 3, and the intersection of Wilder Ave. and Rt. 1. Finally, a stationary road survey was conducted at the intersection of Galilee Escape Road and Rt. 108 to capture the driving demographics of patrol areas in Narragansett.

⁶ Each location was divided into three 4-hour time blocks: 8am-12pm, 12pm-4pm, and 4pm-8pm. Road surveys were not conducted after 8pm due to the difficulty in accurately observing drivers after this time.

As Table 1 illustrates, the non-white driving populations are nearly identical in Westerly with the proportion of non-white observed drivers slightly higher than the proportion of estimated non-white drivers. The percentage of the non-white observed driving population is also higher in Narragansett. On the other hand, the proportions of non-white estimated drivers are greater than the proportions of non-white observed drivers for both North and South Kingstown.

Next, we examine just the observed driving population for each community. Of the 49,357 observations recorded across all four jurisdictions, Westerly accounted for the largest percentage of observed drivers (see Table 2). White motorists made up 93.9% of observed drivers, Black drivers 1.8%, Hispanic drivers 2.6%, Asian drivers 1.6% and drivers from other racial groups less than 1%. More than half of the observed drivers were male (59.8%) while 40.2% were female, and the majority of drivers were from Rhode Island (65.5%) followed by 21.7% in Connecticut.

Table 2 Observed Driving Population Demographics

Jurisdiction	
Narragansett	24.7%
North Kingstown	10.0%
South Kingstown	21.1%
Westerly	44.2%
Race	
White	93.9%
Black	1.8%
Hispanic	2.6%
Asian	1.6%
Other	0.1%
Gender	
Male	59.8%
Female	40.2%
State	
Rhode Island	65.5%
Massachusetts	5.7%
Connecticut	21.7%
Other	7.2%

When observations are broken down by jurisdiction (see Table 3), we find that white males from Rhode Island make up the majority of observed motorists for each community. Also, the percentage of observed Hispanic motorists is fairly consistent across communities; Hispanic drivers made up the second highest percentage of observed drivers in each jurisdiction. There is also a significant amount of motorists from Connecticut (32.2%) observed driving in Westerly, which is best explained by the fact that Westerly borders the Connecticut state line.

Table 3 Observed Driving Population Demographics by Location

	Narragansett	North Kingstown	South Kingstown	Westerly
Race				
White	95.1%	93.5%	93.4%	94%
Black	1.2%	2.0%	2.4%	1.6%
Hispanic	2.1%	2.5%	2.5%	2.8%
Asian	1.5%	1.9%	1.5%	1.4%
Other	0.1%	0.1%	0.2%	0.1%
Gender				
Male	67.2%	62.6%	54.2%	58.8%
Female	32.8%	37.4%	45.8%	41.2%
State				
Rhode Island	66.9%	74.6%	84.1%	57.8%
Massachusetts	11.3%	8.7%	4.2%	3.9%
Connecticut	11.7%	7.1%	5.7%	32.2%
Other	10.1%	9.6%	6%	6.2%

Once we have examined the demographics for observed drivers in each community, we need to compare the observation data with the demographics of the traffic stop data collected in each police patrol area. In order to make accurate comparisons between the stops made by police and the observed driving population, specific survey locations that best represent the driving demographics of police patrol areas were selected against which each of the patrol areas was compared.

Table 4 Difference from % of Total Stops of Non-White Drivers by Police and the Observed Non-White Driving Population (2005)

Narragansett	Total Stops=4868	Total Observations=12173	Differences between stop data and observation data
White (4532)	93.1%	94.2%	-1.1%
Non-White (336)	6.9%	5.8%	1.1%
North Kingstown			
White (8462)	91.4%	93.5%	-2.1%
Non-White (798)	8.6%	6.5%	2.1%
South Kingstown			
White (14230)	89.1%	93.6%	-4.5%
Non-White (1734)	10.9%	6.4%	4.5%
Westerly			
White (2400)	91.6%	94.0%	-2.4%
Non-White (221)	8.4%	5.9%	2.5%

As illustrated in Table 4, the proportion of police traffic stops for white and non-white drivers in 2005 is compared to the proportion of white and non-white drivers observed during the months of July, August and September 2005. It is important to remember that the greater the difference between stops and observations, the greater the disparity. Here we find South Kingstown has the most disparity with a difference of 4.5% between the proportion of non-white stops and non-white observations.

Next, we want to see if disparities increase, decrease or remain the same when we compare traffic stops for the months of July, August and September 2005 to the observation data, bearing in mind that we would expect to see high volumes of non-resident driving during these months.

Table 5 Difference from % of Total Stops of Non-White Drivers by Police and the Observed Non-White Driving Population (July-September 2005)

Narragansett	Total Stops=1048	Total Observations=12173	Differences between stop data and observation data
White (990)	94.5%	94.2%	0.3%
Non-White (58)	5.5%	5.8%	-0.3%
<hr/>			
North Kingstown	Total Stops =2103	Total Observations=4952	Differences between stop data and observation data
White (1948)	92.6%	93.5%	-0.9%
Non-White (155)	7.4%	6.5%	0.9%
<hr/>			
South Kingstown	Total Stops=4572	Total Observations=10406	Differences between stop data and observation data
White (4152)	90.8%	93.6%	-2.8%
Non-White (420)	9.2%	6.4%	2.8%
<hr/>			
Westerly	Total Stops=523	Total Observations=21826	Differences between stop data and observation data
White (475)	90.8%	94.0%	-3.2%
Non-White (48)	9.2%	5.9%	3.3%

As illustrated in Table 5, traffic stop disparities for nonwhite drivers decrease in each jurisdiction during the summer months with the exception of Westerly where the disparity increases from 2.5% for the entire year to 3.3% during the summer months.

When we compare only daytime traffic stops (made between 8 a.m. and 8 p.m.) to the observed driving population for the same time period (see Table 6), the disparity disappears in each jurisdiction except for Westerly; however, the disparity dropped from 2.5% for the entire year to 1.3%, so while more nonwhite drivers are being stopped than observed in Westerly during the months of July, August and September 2005, there is less of a disparity during the summer than for the entire year.⁷

⁷ The disparity is greatest for black motorists in Westerly at 1.3%; however, police stopped only 8 black motorists during the months of July, August and September.

Table 6 Difference from % of Total Daytime (8 a.m. to 8 p.m.) Stops of Non-White Drivers and the Observed Non-White Driving Population (July-September 2005)

Narragansett	Total Stops=509	Total Observations=12173	Differences between stop data and observation data
White (489)	96.1%	94.2%	1.9%
Non-White (20)	3.9%	5.8%	-1.9%
<hr/>			
North Kingstown	Total Stops =1314	Total Observations=4952	Differences between stop data and observation data
White (1228)	93.5%	93.5%	0.0%
Non-White (86)	6.5%	6.5%	0.0%
<hr/>			
South Kingstown	Total Stops=2908	Total Observations=10406	Differences between stop data and observation data
White (2724)	93.7%	93.6%	0.1%
Non-White (184)	6.3%	6.4%	-0.1%
<hr/>			
Westerly	Total Stops=279	Total Observations=21826	Differences between stop data and observation data
White (259)	92.8%	94.0%	-1.2%
Non-White (20)	7.2%	5.9%	1.3%

Finally, we want to compare the disparities calculated using the proportion of the non-white observed driving population and the proportion of the non-white estimated driving population for each community in order to test the accuracy of the non-white estimated driving population.

As Table 7 illustrates, the disparities are nearly identical for Westerly (2.9% and 2.5%). When we compare the differences between the percentage of non-white traffic stops in 2005 and the percentage of non-white driving populations for North and South Kingstown, the disparities are higher when calculated with the observed driving population.

Table 7 Difference between % Non-White Driving Population and Non-White Traffic Stops

	Difference in % Non-White Stops for 2005 and % Non-White Estimated Driving Population	Difference in % of Non-White Stops for 2005 and % Non-White Observed Driving Population
Narragansett	2.6%	1.1%
North Kingstown	0.9%	2.1%
South Kingstown	2.2%	4.5%
Westerly	2.9%	2.5%

SECTION 4: AGENCY SPECIFIC RACE ANALYSIS

The tables in this section of the technical report provide a guide for examining all subsequent agency specific tables. The first few pages walk through the tables using the examples from “Example City” as a guide for reading and understanding the subsequent tables.

Example City

Total Number of Stops:	2,505				
Reason for the Stop:					
		%	N		
	Investigatory	2.1%	(52)		
	Motor Vehicle	94.7%	(2326)		
	Assist	3.2%	(79)		
Basis for the Stop:		%	N	%	N
	Speeding	63.3%	(1580)	Call for Service	0.6% (16)
	Other Traffic Violations	12.4%	(310)	APB	0.2% (5)
	Equipment Violations	13.1%	(327)	Suspicious Person	1.2% (31)
	Registration Violation	5.6%	(140)	Motorist Assist	3.0% (74)
	City or Town Ordinance	0.6%	(15)	Warrant	0.0% (0)
	Special Detail	0.0%	(0)		
Outcome of the Stop:		%	N		
	Citation	38.7%	(966)		
	Notice of Demand	1.1%	(28)		
	Warning	53.9%	(1343)		
	Arrest	1.5%	(38)		
	No Action	4.7%	(118)		
Stops with Search:		%	N		
		1.5%	(36)		
Time of Day:		%	N		
	1 st Shift (8 a to 4 p)	28.3%	(688)		
	2 nd Shift (4 p to 12 a)	35.6%	(864)		
	3 rd Shift (12 a to 8 a)	36.1%	(875)		
Date of Week:		%	N		
	Weekday	74.0%	(1818)		
	Weekend	26.0%	(640)		
Season:		%	N		
	Winter	18.4%	(462)		
	Spring	30.3%	(759)		
	Summer	25.1%	(630)		
	Fall	26.1%	(654)		
Driver Race:		%	N		% N
	White	94.5%	(2362)	Asian	1.3% (32)
	Black/African American	2.3%	(57)	Native American	0.0% (0)
	Hispanic	1.8%	(45)	Other	0.2% (4)
Driver Gender:		%	N		
	Male	57.8%	(1429)		
	Female	42.2%	(1043)		

EXAMPLE CITY

The first page of the tables provides descriptive information for the traffic stops collected between October 1, 2004 and September 30, 2005. The purpose of this table is to provide a snapshot of a jurisdiction's traffic enforcement activity. The first row contains the total number of traffic stops, which for Example City is 2,505. In the next row, the Basis of the Stop, there are eleven possible reasons provided for why the police officer might have stopped a motorist.¹ In Example City, speeding is the most common basis for why police stop motorists (63.3%) and the second highest reason is equipment violations (13.1%). Outcome of the Stop provides information about the official disposition of the traffic stop. In Example City, 38.7 percent of the stops result in a citation and 53.9 percent result in a warning. The Stops with Search row identifies the total the number of stops that resulted in a search. Only 1.5 percent of the stops from Example City resulted in a search.

The descriptive page also includes information about traffic enforcement patterns by time, day, and season. Time of Day, breaks traffic stops down into three shifts, defined here as first shift (8 a.m. to 4 p.m.), second shift (4 p.m. to 12 a.m., and third shift (12 a.m. to 8 a.m.). In Example City, the greatest proportion of stops occurred in the third shift (36.1%). Date of the Week provides a breakdown of traffic stops according to whether they happened during a weekday or a weekend. In Example City, weekday stops account for 74 percent of the total stops. Finally, the row for Season lists traffic stops according to season to help examine traffic enforcement activity over time. In Example City, spring accounts for the most stops with 30.3 percent of the stops and winter accounts for the least amount of stops with 18.4 percent of the stops.

Finally, the descriptive table provides race/ethnicity information about the driver, as well as information about the drivers' gender. Whites in Example City accounted for 94.5 percent of stops, Black/African American's accounted for 2.3 percent of stops, Hispanics accounted for 1.8 percent of stops, and Asians for 1.3 percent of stops. Male drivers account for 57.8 percent of stops.

¹ It is important to note that the activities in Reason for the Stop, Basis for the Stop, and Outcome of the Stop, may not sum to the total number of stops (which is 2,505). This is due to missing cases, where some information is provided about the stop, but there is not enough to determine more than the fact that a stop occurred.

EXAMPLE CITY

Characteristics of the Encounter: Place, Time and Season

The following tables in this section compare the traffic stops in the original study (2001-2003) with the traffic stop patterns in the present (2004-2005) study to help clarify places where disparities emerge and provide more information which may help community members and law enforcement administrators target strategies to reduce these disparities.

Table 1 provides a comparison of traffic stop locations by race in 2001-2003 and 2004-2005. To read this table, it is important to note that the percentages should be examined horizontally. This analysis examines location by race, with attention to which racial groups are stopped in each location. In the example below, non-white drivers make up a greater proportion of the drivers stopped in Post 5 compared to other posts. In 2001-2003, 6.8 percent of those stopped in Post 5 were non-white and in 2004-2005, 5.6 percent of those stopped in Post 5 were non-white.

1. Location by Race

Location	2001-2003			Location	2004-2005		
	White	Non-White	Total		White	Non-White	Total
Post 1	N 294	21	315	Post 1	N 283	10	293
	% 93.3%	6.7%	100.0%		% 96.6%	3.4%	100.0%
Post 2	N 686	22	708	Post 2	N 491	19	510
	% 96.9%	3.1%	100.0%		% 96.3%	3.7%	100.0%
Post 3	N 350	10	360	Post 3	N 238	9	247
	% 97.2%	2.8%	100.0%		% 96.4%	3.6%	100.0%
Post 4	N 267	7	274	Post 4	N 150	8	158
	% 97.4%	2.6%	100.0%		% 94.9%	5.1%	100.0%
Post 5	N 835	61	896	Post 5	N 1121	89	1210
	% 93.2%	6.8%	100.0%		% 94.4%	5.6%	100.0%

EXAMPLE CITY

Table 2 provides a comparison of traffic stops by police shift by race in 2001-2003 and 2004-2005. Time of day is often considered an important variable for understanding why disparities occur. Identifying particular shifts where disparities are greatest may be useful to law enforcement administrators attempting to reduce an identified citywide disparity.

Similar to Table 1 above, this table should be read horizontally, as it compares which groups of drivers, whites or non-whites, are stopped by shift. For this example, in 2004-2005 it appears that police are stopping more minorities during the 3rd shift between 12 a.m. and 8 a.m. This represents a slight change from 2001-2003, when a greater proportion of the stop were non-white during the 2nd shift between 4 p.m. and 12 a.m. If the department in the example wanted to address disparities in traffic stops, examining stops of white and non-whites drivers by shift may point to a particular timeframe when more minorities are being stopped.

2. Shift by Race

Shift	2001-2003			2004-2005		
	White	Non-White	Total	White	Non-White	Total
1st Shift (8am - 4pm)	N 1068	48	1116	N 656	31	687
	% 95.7%	4.3%	100.0%	% 95.5%	4.5%	100.0%
2nd Shift (4pm - 12am)	N 865	56	921	N 820	40	860
	% 93.9%	6.1%	100.0%	% 95.3%	4.7%	100.0%
3rd Shift (12am - 8am)	N 511	22	533	N 812	63	875
	% 95.9%	4.1%	100.0%	% 92.8%	7.2%	100.0%

EXAMPLE CITY

Table 3 provides a comparison of seasonal variations in traffic stops by race in 2001-2003 and 2004-2005. Racial disparities in traffic stops have often been posited to be the result of seasonal differences in traffic enforcement. Examining seasonality may be important because there might be reasons why police are stopping more or less whites or non-whites during a certain time period. Stops during peak time periods may look different than stops made during other times of the year. In the example below, the percentages should be examined horizontally. For Example City the proportion of non-white drivers stopped in the summer changes between the 2001-2003 study and the present study. In the summer of 2001-2003, 4.7 percent of those stopped were non-white and in the summer, in 2004-2005 7.6 percent of those stopped were non-white. Such changes might raise the need for conversation between the police agency and the community.

3. Seasonal Variation in Traffic Stops by Race

Season	2001-2003			2004-2005		
	White	Non-White	Total	White	Non-White	Total
Winter (Dec – Feb)	N 522	28	580	N 440	22	462
	% 95.2%	4.8%	100.0%	% 95.2%	4.8%	100.0%
Spring (Mar – May)	N 793	37	830	N 721	37	758
	% 95.5%	4.5%	100.0%	% 95.1%	4.9%	100.0%
Summer (Jun – Aug)	N 654	32	686	N 580	48	628
	% 95.3%	4.7%	100.0%	% 92.4%	7.6%	100.0%
Fall (Sep – Nov)	N 515	31	546	N 621	31	652
	% 94.3%	5.7%	100.0%	% 95.2%	4.8%	100.0%

Table 4 provides a comparison of racial differences in stops by shift for each location between 2001-2003 and 2004-2005. Looking at the proportion of non-white stops by police shift and location helps to identify if there are patterns during specific time periods or in specific areas that lead to disparities. Examining white and non white stops by both police shift and location also helps to examine whether there might be some sort of interaction affect between time and location. Specific types of police interventions in specific areas might be conducted during the evening, resulting racial in disparities. In 2001-2003, in Post 1, 5.6 % of the drivers stopped during the first shift were non-white. In 2004-2005, in Post 1, 2.1 of the drivers stopped during the first shift were non-white. This represents a decline in the proportion of non-whites stopped for Post 1 during Shift 1. One note of caution about this example: though the proportion of non-white drivers stopped changes, the two categories described involve a small number of non-white drivers. Readers must be cautious when interpreting these tables due to small numbers of stops in some categories.

4. Racial Differences in Stops by Shift for Each Location

Shift	Location	2001-2003			Location	2004-2005		
			White	Non-White			White	Non-White
Shift 1 (8am - 4pm)	Post 1	N	136	8	144	Post 1	N	143
		%	94.4%	5.6%	100.0%		%	97.9%

Characteristics of Individuals Stopped: Age, Gender and Race

Table 5 provides a comparison of race, gender and age of motorists stopped both in 2001-2003 and 2004-2005. Unlike the previous tables, which were read horizontally, Table 5, below should be read vertically. In Example City, white males over 30 years of age constitute the largest group stopped for each of the study periods, accounting for 29.9 percent of stops in 2001-2003 and 30.9 percent of stops in 2004-2005. In the example, it is interesting to note that there is an increase in the number of young white females being stopped. In 2001-2003, 11.3 percent of stops were white women under 31 while this same group was stopped 15.9 percent of the time in 2004-2005.

5. Age, Gender and Race

Race/Gender/Age	2001-2003		2004-2005

	%	100.0%	%	100.0%

Characteristics of the Stop: Reason for Stop and Basis for Stop

Information about both the reason and the legal basis for why a motorist was stopped may be one of the most helpful ways to understand the existence of racial disparities in traffic stops. Much of the literature on racial profiling has focused on disparities in traffic stops for highly discretionary police actions. Table 6 provides a comparison of reason for stop by race in 2001-2003 and 2004-2005. Reading the tables vertically, we see that non-white drivers are proportionately more likely to be stopped for investigatory purposes (9.5%) in 2004-2005 than white drivers (2.0%).

6. Reason for Stop by Race

Reason for Stop	2001-2003		2004-2005	
	White	Non-White	White	Non-White
Investigatory	N 48	3	N 6	2
	% 2.1%	2.2%	% 2.0%	9.5%
Motor Vehicle Violation	N 2197	124	N 266	18
	% 94.8%	92.5%	% 90.8%	85.7%
Assist	N 72	7	N 21	1
	% 3.1%	5.2%	% 7.2%	4.8%

Table 7 provides a comparison of location by reason for stop by race in the 2001-2003 study and the 2004-2005 study. Examining the proportion of non-white stops by location and reason for stop helps to identify if targeting specific reasons for stop in particular locations alters the demographics of who is stopped. In this table, the percentages should be examined horizontally. In Example City, 12.7% of the stops in 2001-2003 in Post 5 for Assists were non-white, compared to only 5.7% of assist stops in Post 5 in 2004-2005.

7. Location by Reason for Stop by Race

Location		2001-2003		Location		2004-2005	
Reason for Stop		White	Non-White			White	Non-White
Investigatory	Post 1	N	6	2	Post 1	N	9

		%	100.0%	0.0%		%	100.0%
Investigatory	Post 5	N	16	3	Post 5	N	9
		%	84.2%	15.8%		%	100.0%
Motor Vehicle Violation		N	751	49		N	1063
		%	93.9%	6.1%		%	92.6%
Assist		N	62	9		N	33
		%	87.3%	12.7%		%	94.3%

Finally, Table 8 provides a comparison of basis for stop by race for 2001-2003 and 2004-2005. These percentages should be read vertically, to examine the reasons why each racial group was stopped. In this example, there is an interesting finding in the 2004-2005 data. Equipment violations account for 12.9 percent of white stops and 16.2 percent of non-white stops. Knowing the reason for the stop can identify if particular enforcement strategies may be resulting in greater non-white stops.

8. Basis for Stop by Race

SECTION 5: LOCATION SPECIFIC SEARCH TABLES – BY AGENCY

The following tables are intended to help agencies understand the demographics of searches in various locations across their municipality. The tables provide breakdown of the total stops for each racial group that result in a search at each location area. In the Table below, for example, 4.2% of the white stops (25/606) in post 1 result in a search or frisk. In that same post, 11.1% of the non-white stops result in a search (6/57).

A breakdown of stops that result in either a discretionary search (excluding searches incident to arrest) or an extra discretionary search (excluding both incident to arrest and inventory searches) is also included. In the example below, 5 out of the 606 white stops resulted in an extra discretionary search (0.8%) and 4 of the 57 non-white stops resulted in an extra discretionary search (7%).

Example City

Location	Total White Stops	Total Non- White Stops	Search and Frisk		Search and Frisk Excluding Incident to Arrest		Search and Frisk Excluding Incident to Arrest & Inventory
